DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Shvarts et al., U.S. Patent # 6,788,151 B2.

Fig. 1A of Shvarts discloses a circuit comprising: a control circuit (detector DSP 104, COMP 106, Power supply 102, switches 112); a delay circuit (108) and an RF power amplifier (110); wherein the control circuit comprises a detector (detector DSP 104) for detecting an instantaneous power level of an input signal from a signal source (120); a threshold comparator (106); a power supply voltage source (102); and a pulse shaping filter (114); wherein the threshold comparator is provided with a plurality of preset thresholds (COMP1-1 to COMP1-n); wherein the threshold comparator (106) compares the power level detected at the detector (104) with the preset thresholds; wherein the power supply voltage (V1-Vn) switched according to the output of the threshold comparator (106); and wherein the delay device (108) delays the input signal to the power amplifier (110) to enable the power supply voltage to be adapted to the

power level detected at the detector (104), such that the efficiency of the power amplifier is optimised.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shvarts et al., U.S. Patent # 6,788,151 B2.

In Fig. 1A, LPF 116 can be read as a filter.

Although Shvarts et al. does not mention that his amplifier is a class B amplifier, this is just a type of amplifier and it would have been obvious at the time the invention was made to a person having ordinary skill in the art to use class B amplifier for the amplifier of Shvarts et al. in the absence of unexpected results since such substitution is well known in the art to have an optimum working condition for the circuit.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 6,714,071 B1, # 7,031,457 B2, # 5,787,336, and 2005/0242875 A1 contain some limitations of the claimed invention.
